

## **2013 Dubuissou Lake Aquatic Vegetation Control Plan**

### **LDWF, Inland Fisheries**

Dubuissou Lake is a man-made lake right off of I-49 in St. Landry parish 4 miles north of Washington, Louisiana. The dirt from this lake was used to construct I-49 and build a rest area adjacent to the lake. The lake is 25 -30 feet deep and very shallow near the shoreline. Generally turbid year round due to runoff from irrigation practices, but develops a plankton bloom in the late summer months. Aquatic vegetation is not a problem in this small impoundment.

### **Water body Information**

***Waterbody Type:***

Impoundment

***Parish/Location:***

St. Landry Parish, LA

***Date Created:***

1985

***Size (surface acres):***

Lake: 200 acres

***Water shed:***

Watershed Ratio: Unknown

***Water Control Structures:***

**Description:**

There is no water control structure in this lake. There is a levee around the lake with natural drainage areas where water enters and exits the lake.

***Ownership:***

The Department of Transportation and Development owns the lake and the Louisiana Department of Wildlife & Fisheries manages the fish and wildlife resources.

### **Past Control Measures:**

None

## **Aquatic Vegetation Status:**

### **Biomass:**

No aquatic vegetation – floating or submersed

## **Limitations:**

None at this time

## **Recommendations:**

### ***Biological Control***

None

### ***Chemical Control***

Continue routine observation. If aquatic vegetation becomes a problem, the appropriate herbicide will be applied as per label directions.

### ***Physical Control***

None
